

**Audit smarter
Built for cubic**

Designed for builder

Qbuild is a fully functional platform that allows you to quickly and easily audit any Qubic smart contract, identifying potential vulnerabilities and generating a complete set of tests to automatically verify vulnerabilities.

Outline Qbuild

This presentation walks you through the vision, core functionality, technical value, and strategic potential of Qbuild.

The first security-first development tool designed for Qubic builders.

01 The Problem

02 The Solution: Qbuild

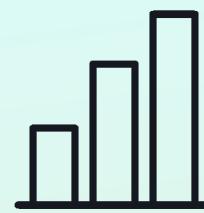

03 User Journey

04 Technologies

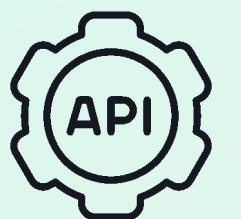

05 The Ask (Grant Juistification)

06 Team & Vision

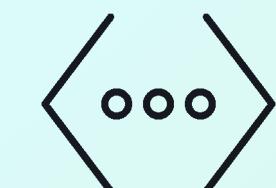

The problem

1- Smart contracts on Qubic are growing, but there's no easy way to detect vulnerabilities before deployment.

2 - Auditing smart contracts manually is slow, expensive, and inaccessible to most developers.

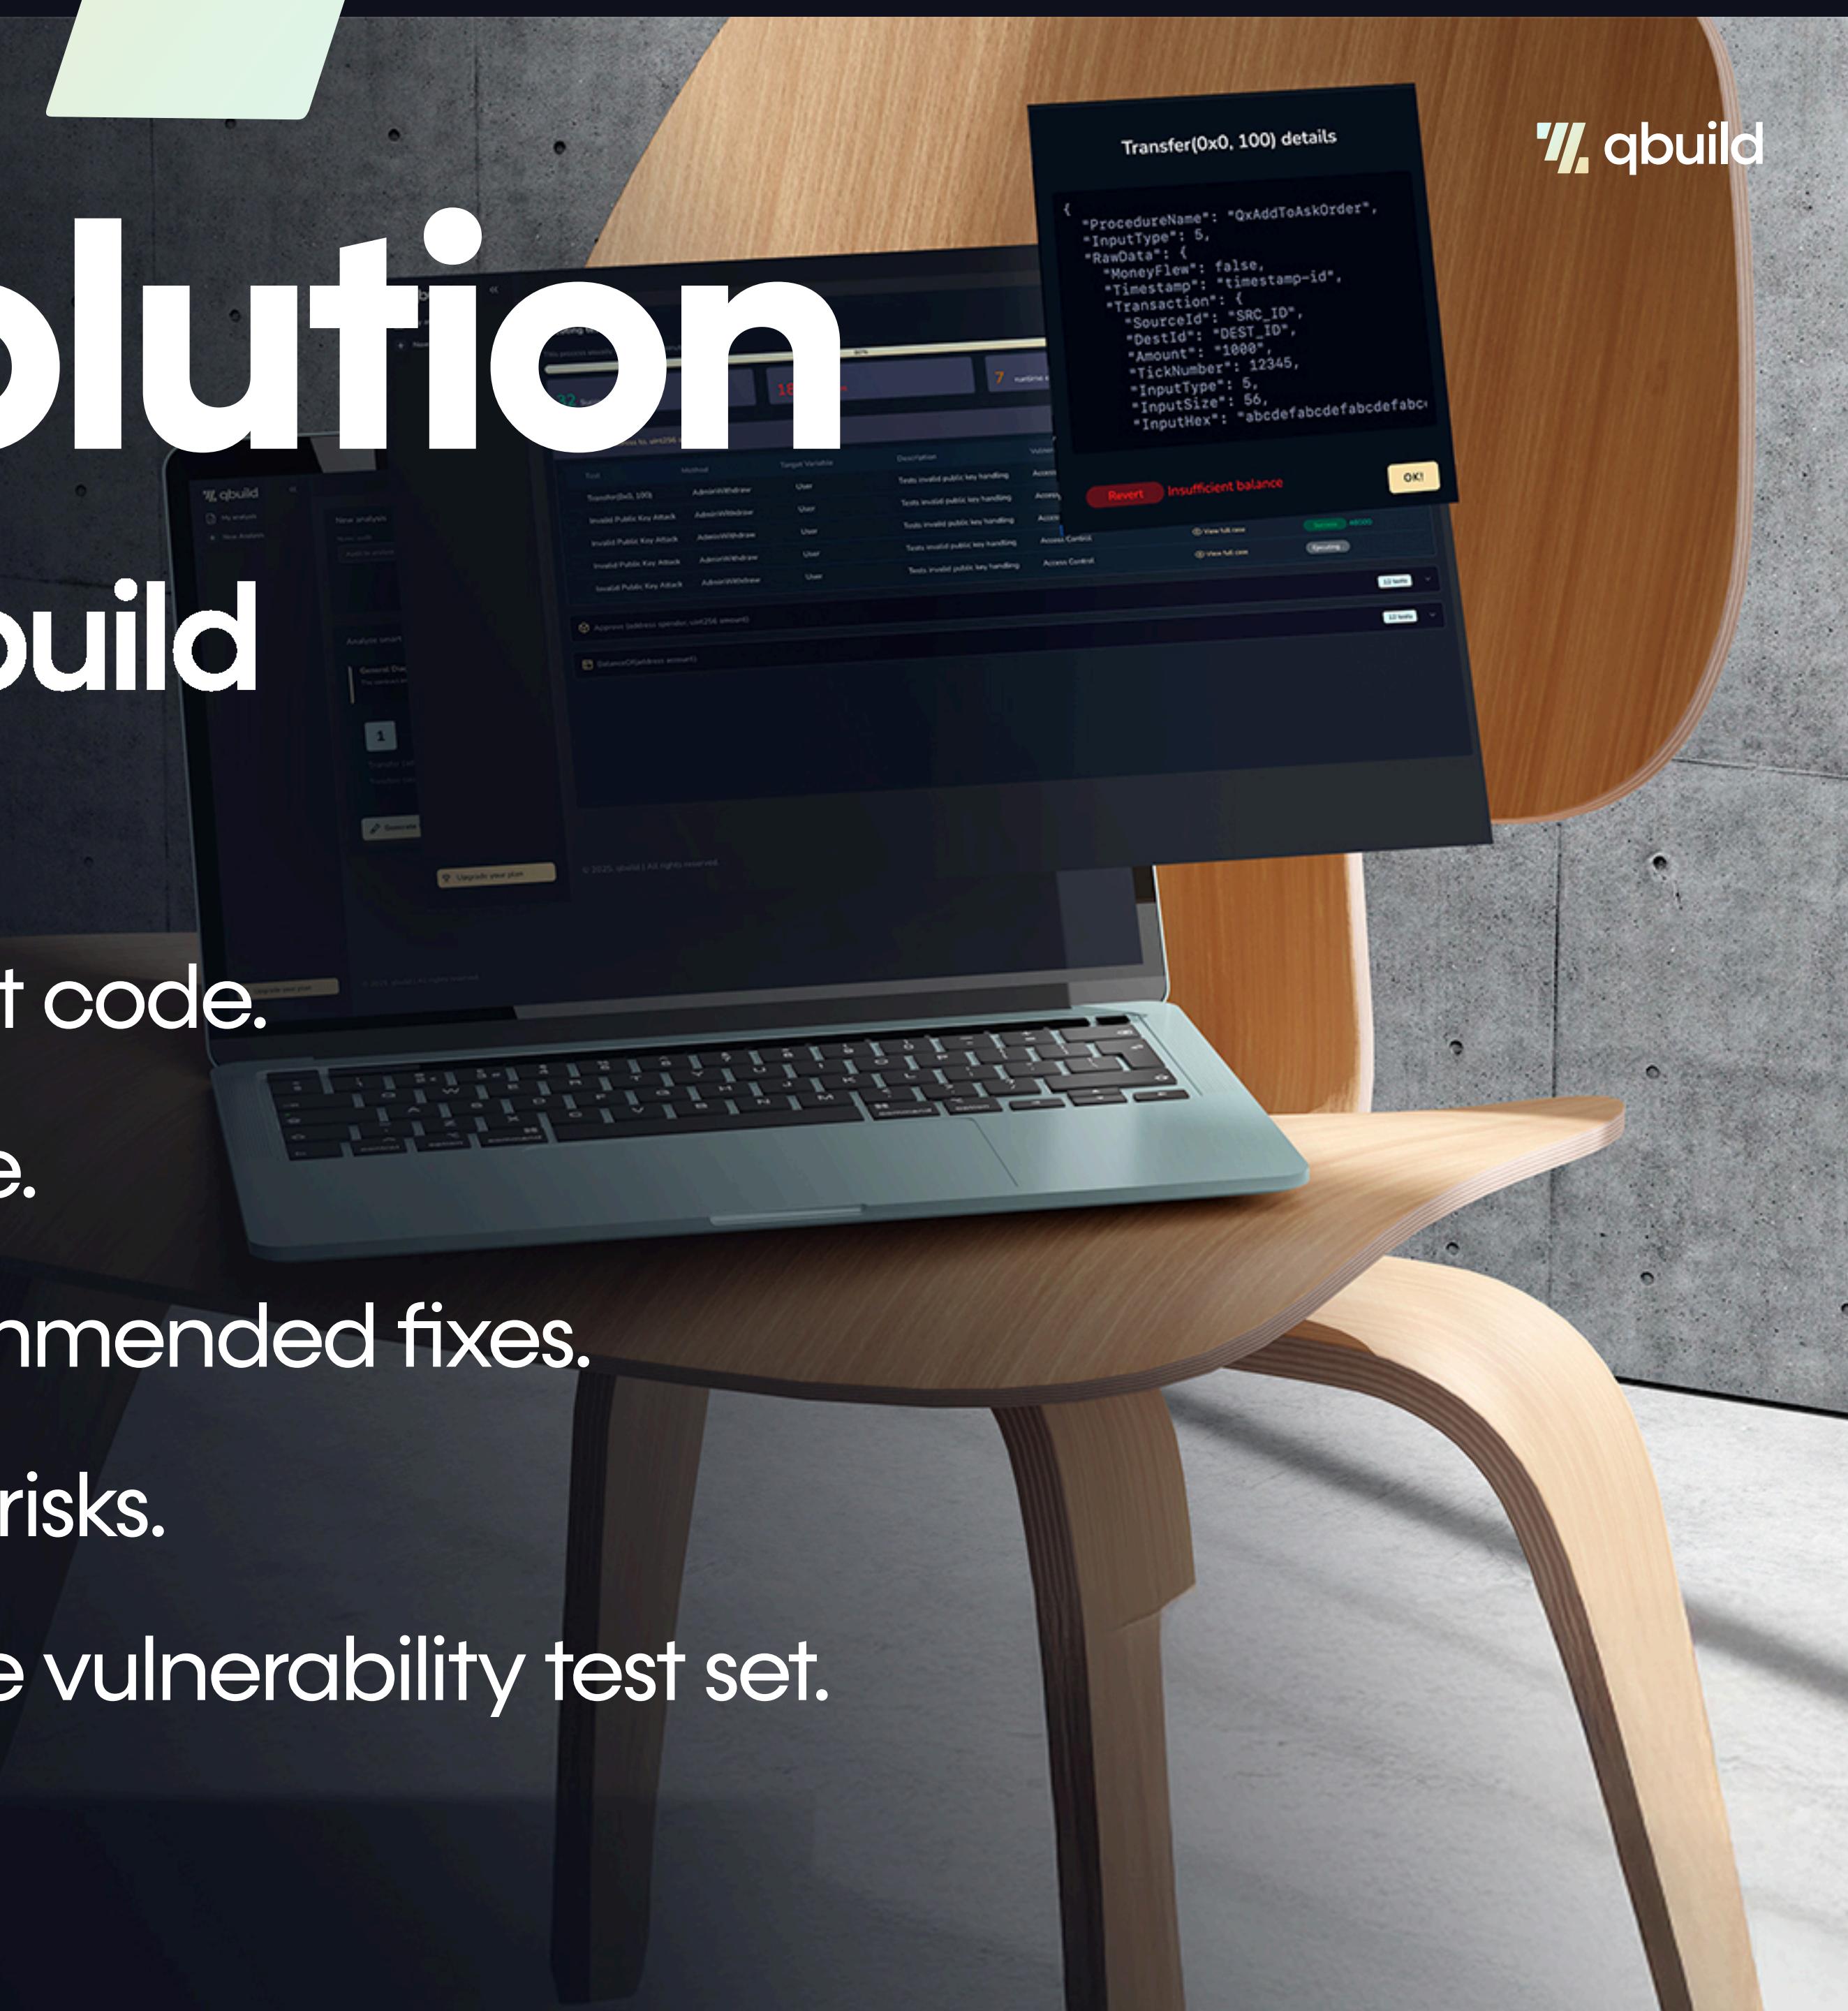

3- Developers still lack a reliable way to test and simulate real attack scenarios on-chain.

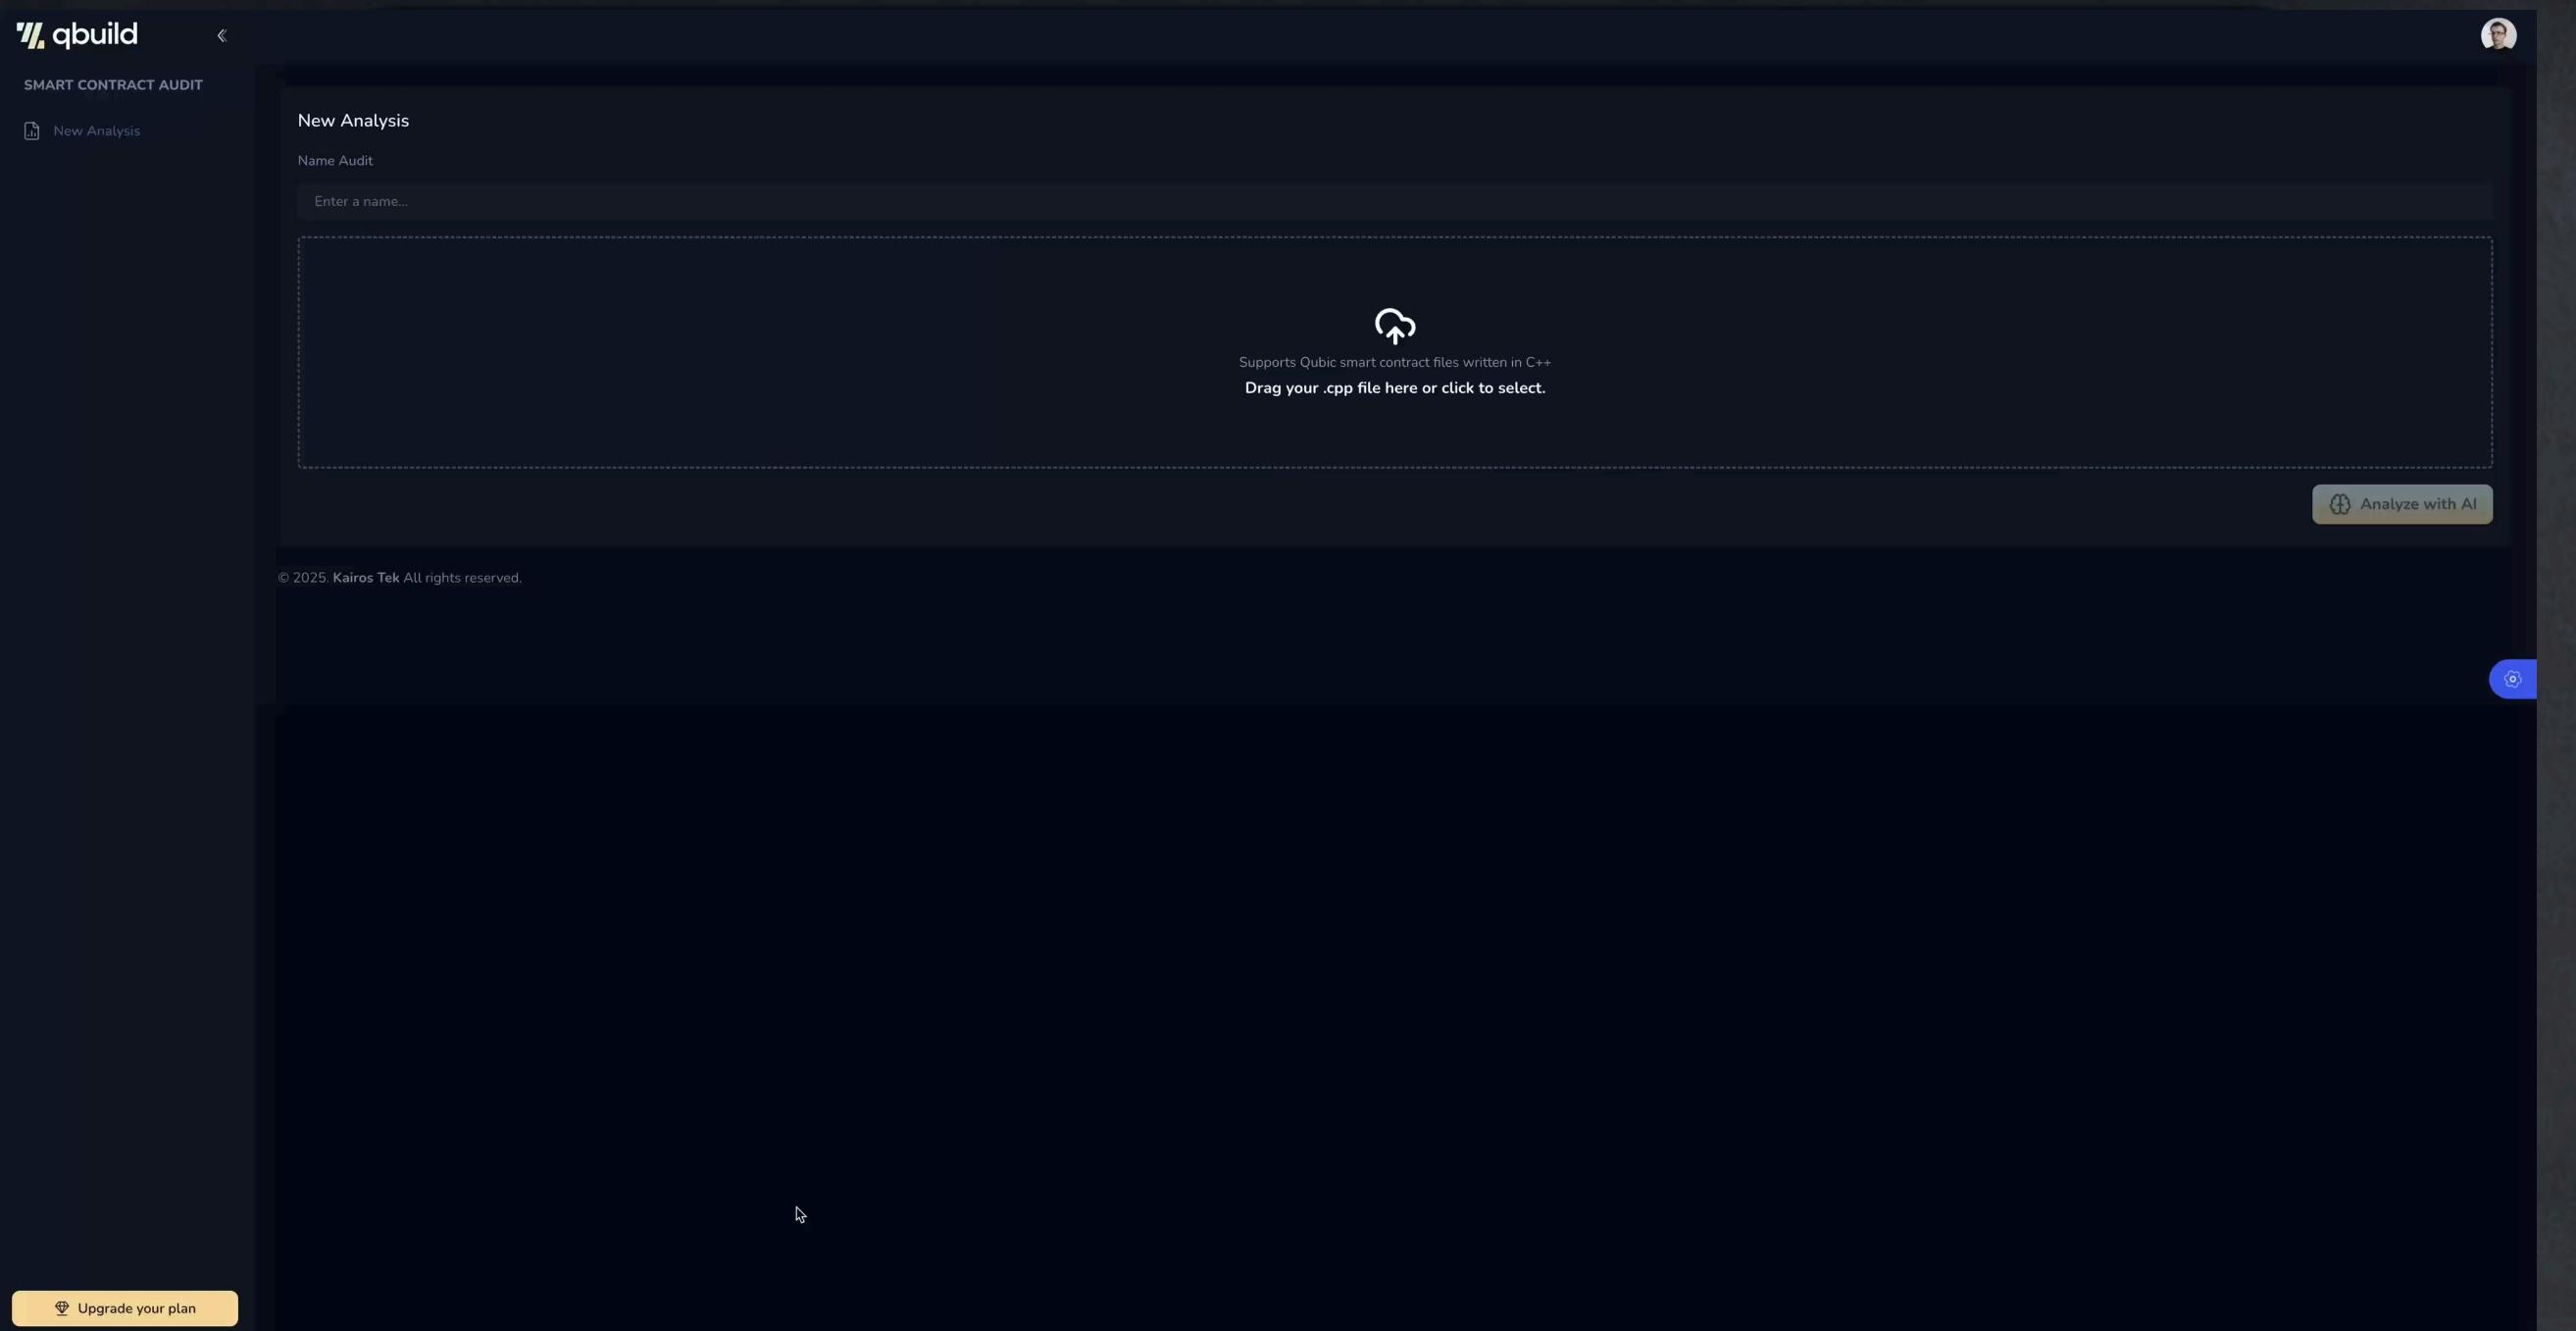

The solution

- Upload and analyze smart contract code.
- Automatically deploy to a test node.
- Get instant audit reports with recommended fixes.
- Launch attack simulations to verify risks.
- Generate automatically a complete vulnerability test set.
- Iterate and secure contracts faster.

Userjourney

Key features

1 Automated analysis:

Syntax + logic vulnerability detection

2 Detailed audit report

Full breakdown + suggested fixes

5 Developer toolbox

Web UI for full control

4 Real exploit testing

Try real-world attacks in seconds

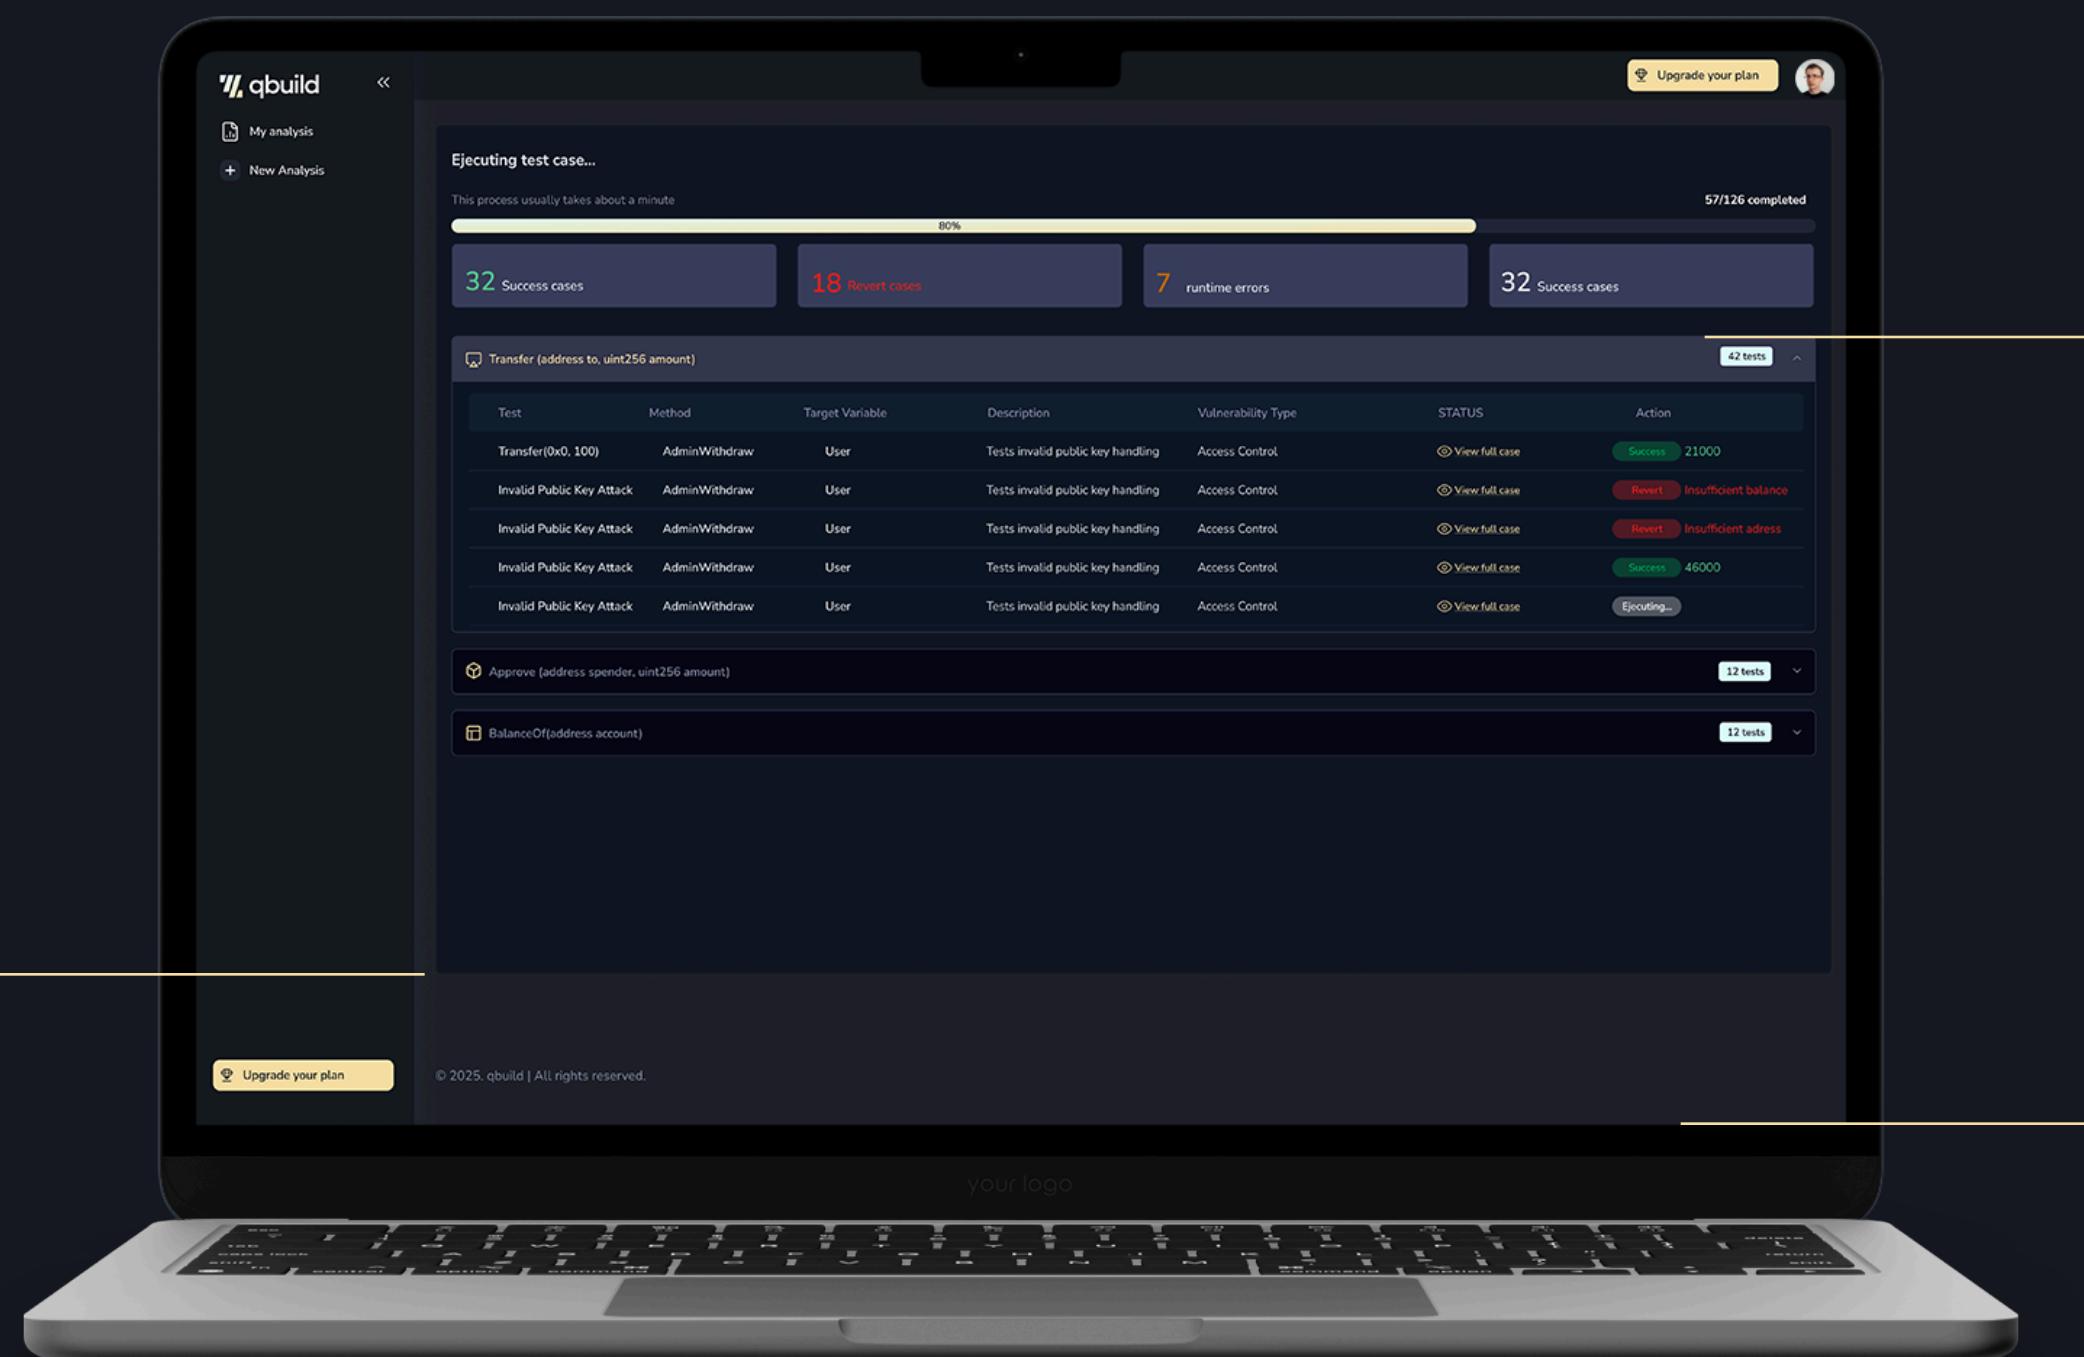

3 Testnet deployment

Seamless integration with Qubic test node

Tech Architecture

Qubic test node
Qubic's TypeScript library
Q-Forge's frontend
Qubic CLI
Qubic RPC
Groq API

Angular
Vristo UI
Tailwind CSS
.NET 8.0

AWS Lambda
AWS Cloudfront
AWS S3
AWS Api Gateway

Kairos Team

Jorge Ordovás
CEO

Jesús Lanzarote
CTO

Rafa Montaño
UXD

Max Power
Blockchain Full Stack

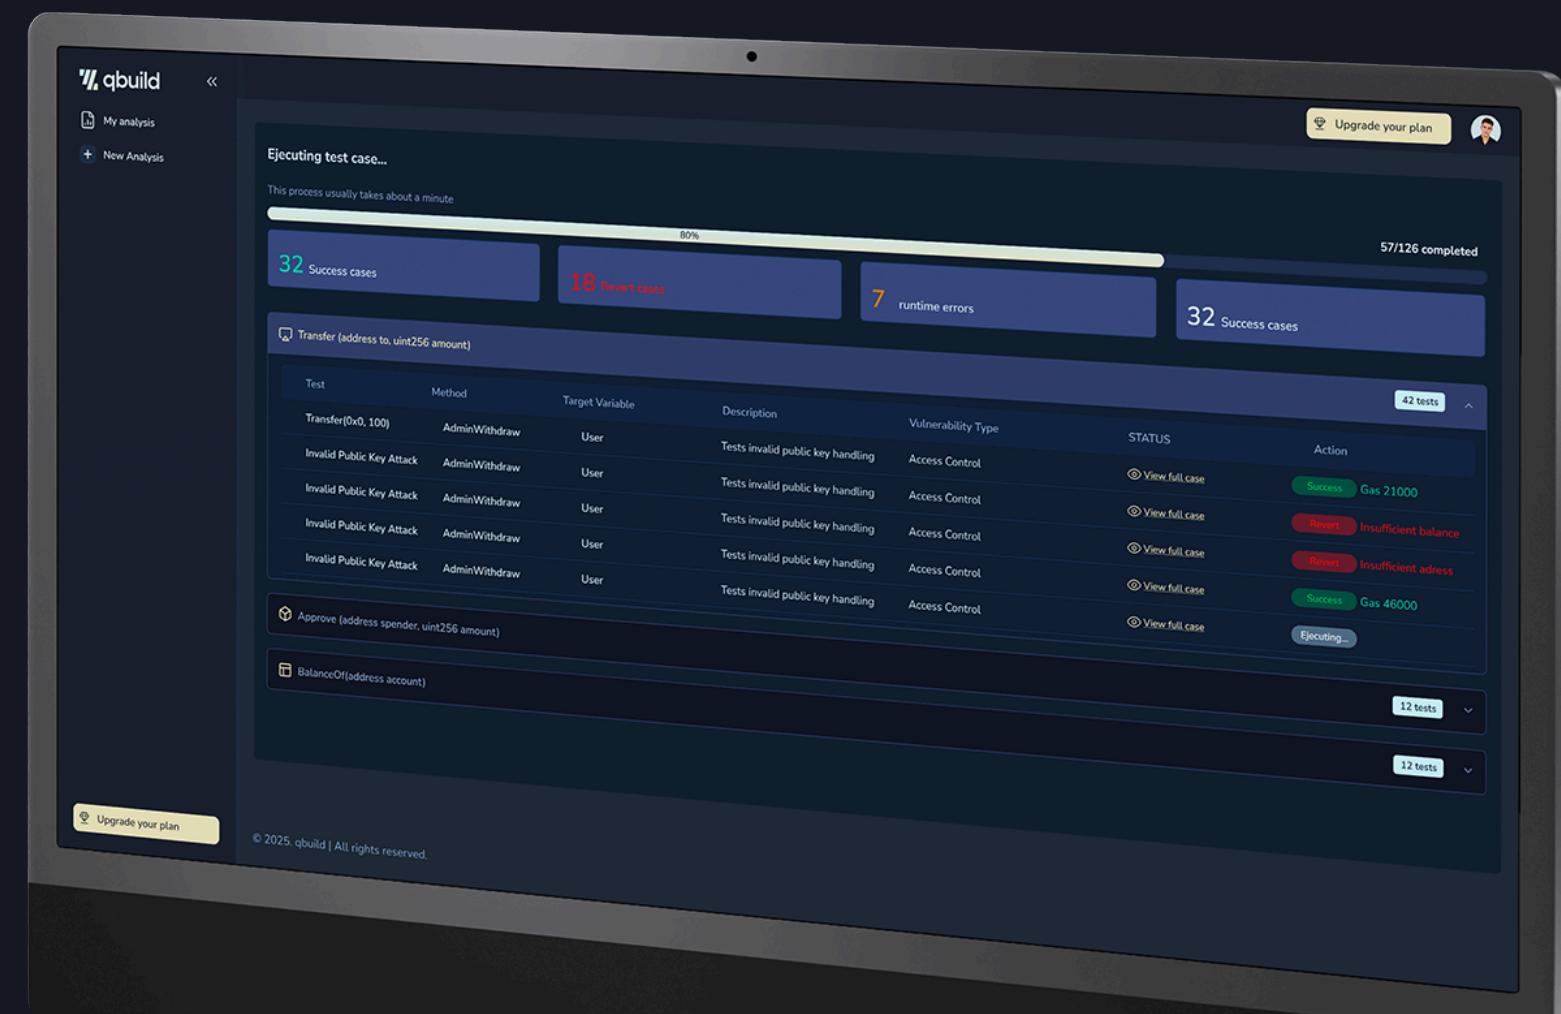

Alberto García
Blockchain SRE

Vision

Kairos to become one of the main contributors to Qubic ecosystem, obtaining a grant to make **Qbuild** the default audit and testing tool in the Qubic ecosystem.

Evolve Qbuild to be a complete development suite for secure, real-world-ready smart contract development.
